VIA AIRBORNE

Mr. William Daigle, P.E. Chief, Special Projects Section N.Y.S. Department of Environmental Conservation 50 Wolf Road Albany, New York 12233-7010

Re: Onondaga Lake

Syracuse, New York

Dear Mr. Daigle:

This letter constitutes the response of the Crouse-Hinds Division of Cooper Industries, Inc. ("Cooper") to the Joint Request for Information regarding the captioned site. Cooper was granted a thirty day extension to respond to this request.

In order to respond to this Request for Information, a reasonable search of company records has been made. Copies of those documents relevant to this request are attached hereto. The EPA's letter requested that Cooper's response be accompanied by a notarized affidavit from a company representative or official. It is Cooper's position that neither Section 104 of CERCLA nor Section 3007 of RCRA contain requirements that the information and documentation submitted in response to this request include a notarized affidavit of the type you requested. Cooper has made a diligent search of its records and conducted an investigation of its involvement with this site, and we are confident that the responses contained herein are accurate, to the extent that information is currently available. Cooper will supplement its response at the earliest possible time if and when subsequent information becomes available.

We trust that the attached information is responsive to your Request for Information.

Very truly yours,

H. anne Lemelle

W. Anne Lemelle Legal Assistant, Environmental

50 Wolf Road Albany, NY 12233

REQUEST FOR INFORMATION - ONONDAGA LAKE RESPONSE OF COOPER INDUSTRIES, INC. (CROUSE-HINDS DIVISION)

1. a. State the correct legal name and address of your company.

Response:

Mailing address:

Cooper Industries, Inc.

P. O. Box 4446

Houston, Texas 77210

Physical address:

1001 Fannin, Suite 4000 Houston, Texas 77002

b. Identify the state of incorporation of your company and your company's agent for service of process in the state of incorporation and in New York.

Response: Cooper Industries, Inc. (hereinafter "Cooper") is incorporated in the State of Ohio. Its agent for service of process in Ohio is:

CT Corporation 815 Superior Ave., N.E. Cleveland, Ohio 44114

Cooper's agent for service of process in New York is:

CT Corporation 1633 Broadway New York, New York 10019

2. State the name(s) and address(es) of the President, the Chairman of the Board and the Chief Executive Officer of your company.

Response:

Robert Cizik

Chairman and Chief Executive Officer (CEO)

H. John Riley, Jr.

President and Chief Operating Officer (COO)

Cooper Industries, Inc.

P. O. Box 4446

Houston, Texas 77210

3. If your company is a subsidiary or affiliate of another corporation, or has subsidiaries, identify each such entity and its relationship to the company, and state the name(s) and address(es) of each such entity's President, Chairman of the Board and Chief Executive Officer.

Response: Crouse-Hinds Electrical Construction Materials is an unincorporated division of Cooper. The President of Crouse-Hinds Division is:

William M. Tuck
President, Crouse-Hinds Division
Cooper Industries, Inc.
P. O. Box 4999
Syracuse, New York 13221

Robert Cizik is the Chairman of the Board and Chief Executive Officer.

4. List all of your facilities which generated, handled, transported, treated, stored or disposed of hazardous substances, hazardous wastes, or industrial wastes which are, or were formerly, located within fifty miles of any point along the shoreline of Onondaga Lake. For each such facility, state its name and address, and period of operation. Please identify any name and address, and period of operation. Please identify any of your facilities that are no longer in operation within this area.

Response: The following facilities were operated by Crouse-Hinds during the subject period.

Site	Period of Operation	Nature of Operation	Processes
500 Water Street Syracuse, NY	1897-190?	Manufacturing & warehousing of electrical switches, panelboards & lights	Machining & assembly
Jefferson Street Syracuse, NY	190?-1912	Manufacturing & warehousing of electrical switches, panelboards & lights	Machining & assembly
Wolf & 7th North Streets Syracuse, NY 13221 (owned)	1912- Present	Manufacturing & warehousing of electrical fittings, enclosures, panelboards, switches, traffic signals and lighting	Casting, machining, finishing, and assembly

Site	Period of Operation	Nature of Operation	Processes
7456 Morgan Rd. Clay, NY 13090 (owned)	1965-1994	Manufacturing and warehousing of commercial & industrial lighting, enclosures and apparatus	Assembly & finishing
Crossroads Park Henry Clay Blvd. Clay, NY 13090 (leased)	1975-1983	Manufacturing and warehousing of traffic lighting and controllers	Assembly & finishing

In the cover letter to the request for information, you requested an EPA Identification Number for Crouse-Hinds. The EPA Identification Number for the Crouse-Hinds facility located at Wolf & 7th North St. is NYD002227973. The EPA Identification Number for the former Morgan Road facility of Crouse-Hinds is NYD000726737. The Water St. and Jefferson St. facilities of Crouse-Hinds ceased operations before the EPA began issuing ID numbers. The Crossroads Park facility of Crouse-Hinds was sold shortly after Cooper Industries, Inc. acquired the Crouse-Hinds Company. Cooper has been unable to locate an EPA ID No. for this facility.

5. Indicate the nature of the operation for each facility identified in Question 4 above. If the operations changed, indicate the nature of those changes (including any name changes) and the dates the changes took place.

Response:

Water Street Facility

The original site of Crouse-Hinds Electric Company, located at 500 Water Street in Syracuse, NY, was primarily a machining and assembly facility for purchased components. Very little is known of the processes or the materials used in the processes. Nothing is known of waste or waste water generation and disposal. Operations expanded and moved to the Jefferson Street facility (Syracuse) around the turn of the century.

Jefferson Street Facility

The Jefferson Street site was primarily a machining and assembly facility for purchased components. Very little is known of the processes or the materials used in the processes. Nothing is known of waste or waste water generation and disposal. Operations expanded and moved to the Wolf & 7th North Street facility (Syracuse) in 1912.

Wolf & 7th North Street Facility

The Wolf & 7th North Street facility remains the primary manufacturing site for Crouse-Hinds. Ground was broken in 1910. In 1912, the site included a captive foundry which supplied iron, aluminum and bronze castings to the machining, finishing and assembly processes. Very little is known of the processes or materials used in the early years of operation.

Manufacturing processes in operation today include: aluminum and iron casting, machining of aluminum, iron, steel, copper and bronze, washing of aluminum, iron, steel and bronze, zinc plating of iron and steel, thermoset plastic molding, painting pretreatment, spray painting, powder painting, welding, brazing, assembly and packaging. Service operations include a machine maintenance shop, vehicle maintenance shop, tool shop, model room and boiler house. Records are not available that indicate when individual processes were changed.

Morgan Road Facility

The Morgan Road facility initial construction phase in 1965 consisted of a product development and engineering center. Manufacturing was added to the site in 1970. Processes included spray painting and assembly of industrial and commercial lighting products. This operation was moved to Vicksburg, Tennessee in 1983. Light assembly and component warehousing operations were transferred to Morgan Road from the Wolf & 7th North Street site in 1985. Manufacturing operations were transferred to Roanoke, Virginia in 1994.

Crossroads Park Facility

In 1975, manufacturing of traffic lights and controllers was consolidated at the Crossroads Park facility. Processes included spray painting, printed circuit board assembly and final assembly of purchased components. In 1983, the business was sold to Traffic Control Technologies. No records of waste generation, transport or disposal are available for this operation.

6. For each facility identified in your response to Question 4 above, provide a detailed process/mechanical description of the processes used, the wastes generated from such processes, and the volume or weight of such wastes. If the process and/or waste stream changed, indicate the nature of the changes (including volumes) and the dates the changes took place. For each such waste stream provide any analyses that you have of the chemical composition of the waste stream.

Wolf & 7th North Street

A description of the processes and wastes generated in each department at the Wolf & 7th North Street facility is attached hereto as Appendix 1. Materials or supplies currently approved for purchase to support these processes are listed in the Crouse-Hinds Chemical Management and Control Policy and Procedure, attached hereto as Appendix 2. Analyses of the wastes currently generated is attached as Appendix 3.

Other Facilities

Cooper does not have detailed process and waste information for the other facilities.

7. Explain in detail the manner of transportation or disposal of the hazardous wastes, hazardous substances and industrial wastes generated, handled, treated or stored at the facilities identified in your response to Question 4 above. Provide a separate response for each facility identified in your answer to Question 4 above.

Response:

Wolf & 7th North Street

Records indicate that Crouse-Hinds operated an incinerator on-site until 1962. Between 1962 and 1969, wastes were hauled to the South Landfill on Crouse-Hinds' property. This landfill was operated by the City of Syracuse as a municipal landfill from 1960 through 1963. The North Landfill, also located on Crouse-Hinds' property, received some quantity of solid waste starting in the mid-1950s. In 1972, Crouse-Hinds decided to use the North Landfill for all nonputrescible solid waste. No records exist regarding the hauling or disposal of wastes not deposited in the North Landfill for this era. Wastes deposited at the North Landfill included foundry sand, floor sweepings, core butts, metal scrap, used floor absorbent, metal buffing and polishing residue, scrap lumber, zinc hydroxide sludge. waste paper and cardboard. In 1979, this practice was discontinued and only foundry sand, metal finishing dust, inert plastic waste and cupola waste were deposited in the North Landfill. This practice continued into 1987. From 1987 to 1989, deposits were limited to foundry sand only. In May 1980, the Resource Conservation and Recovery Act was promulgated and Crouse-Hinds embarked on a program to inventory any solid waste for hazard classification. A Summary of Annual Hazardous Waste Generators Reports detailing disposal and transportation of RCRA hazardous wastes is included as Appendix 4. Information on non-regulated waste transportation and disposal is not available prior to 1984. From 1984 until 1992, Raite Rubbish Removal

transported non-regulated waste to the Onondaga County Ley Creek Transfer Station where it was consolidated prior to disposal at the Seneca Meadows Landfill. In 1992, a contract was signed with Feher Rubbish Removal to provide transportation to the Onondaga County Ley Creek Transfer Station where wastes were consolidated with municipal wastes for municipal incineration or disposal at the Empire Landfill in Pennsylvania.

Other Facilities

Cooper does not have detailed process and waste information for the other facilities.

8. For each type of hazardous waste, hazardous substance, and industrial waste material listed above, provide the names and addresses of all transporters and disposal facilities used, and state when each such transporter and disposal facility was used.

Please identify the total volume or weight of such material that was transported by that entity or individual to each such disposal facility.

Response: Please refer to Cooper's response to Question 7 above.

- 9. State whether any hazardous substances, hazardous waste or industrial waste, as those terms are defined in Instructions 11-13, was ever released or discharged into the environment at your facility. If yes, provide the following information:
 - a. If this was a continuous or intermittent practice or event, identify the period of time during which this practice or event occurred and the hazardous substances and the quantity that was released or discharged and to where it was discharged. (In addition to a description of the discharge location, the discharge location should be shown on a map of the area and enclosed with your reply.)
 - b. If there was no continuous or intermittent practice or event of release or discharge,, specify the date of each incident, the hazardous substances and the quantities that were released or discharged.
 - c. If any of the hazardous substances released would have entered either directly or indirectly (e.g. through surface runoff or groundwater migration) into Onondaga Lake or its tributaries, please provide the path or release.

Wolf & 7th North Street

Between 1962 and 1969, solid wastes were hauled to the South Landfill on Crouse-Hinds' property. The South Landfill was operated by the City of Syracuse as a municipal landfill from 1960 through 1963. Both the North and South Landfills are bordered on the northwest by Ley Creek. The North Landfill, also on Crouse-Hinds' property, received some quantity of solid waste starting in the mid-1950s. In 1972, Crouse-Hinds decided to use the North Landfill for all nonpetruscible solid waste. No records exist regarding the hauling or disposal of wastes not deposited in the North Landfill for this era. Wastes deposited at the North Landfill included foundry sand, floor sweepings, core butts, metal scrap, used floor absorbent, metal buffing and polishing residue, scrap lumber, zinc hydroxide sludge, waste paper and cardboard. In 1979, this practice was discontinued and only foundry sand, metal finishing dust, inert plastic waste and cupola waste were deposited in the North Landfill. This practice continued into 1987. From 1987 to 1989, deposits were limited to foundry sand only. The North Landfill was investigated by the NYSDEC Division of Solid and Hazardous Waste and was assigned a Hazard Ranking System Score of 10.51 (see Appendix 5). It is a Class 3 inactive hazardous waste site which is defined as "sites that have been investigated and do not pose a significant threat to the environment."

Industrial waste waters generated at the Wolf & 7th North Street facility were discharged to a City of Syracuse storm sewer until 1970. This storm sewer discharged to Ley Creek, a tributary of Onondaga Lake. In 1970, a sewer diversion project redirected waste waters to an Onondaga County sanitary sewer. Sanitary waste waters have been discharged to a City of Syracuse sanitary sewer since 1912. Historical processes generating waste waters included zinc electroplating, metal parts washing, boiler blow-down, and non-contact cooling waters.

Other Facilities

Cooper has no information or documents of releases at any other Crouse-Hinds facility listed in Cooper's response to Question 4 above.

- 10. Was any of the material described in your response to Question 9 treated prior to direct discharge into the Lake or its tributaries, or pretreated prior to discharge into a municipal sewerage system which discharges to the Lake or a tributary to the Lake? If so:
 - a. describe the treatment or pretreatment process and capacity and whether discharges were continuous or intermittent;

- b. the years during which treatment or pretreatment occurred, including date treatment or pretreatment began, and whether discharges continue or date of cessation of discharges if discontinued:
- the quantities of influent waste treated or pretreated;
- d. the quantities and composition (chemical analysis) of treated or pretreated material discharged;
- e. whether the material was discharged directly into the Onondaga Lake, a tributary of the Lake or into a municipal sewerage system which discharges to the Lake or a tributary of the Lake;
- f. how you disposed of any sludges or residues generated by the treatment or pretreatment process; and
- g. provide the location of discharge and, if applicable, the name of municipal sewerage system to which discharge was made.

Wolf & 7th North Street

Sanitary waste waters have been discharged to a City of Syracuse sanitary sewer since 1912. Industrial waste waters were discharged to a City of Syracuse storm sewer until 1970. This storm sewer discharged to Ley Creek, a tributary of Onondaga Lake. In 1970, a sewer diversion project redirected waste waters to an Onondaga County sanitary sewer. A summary record of waste water discharges from 1988 to present is included as Appendix 6. Systems installed to pretreat waste waters prior to discharge include:

- 1) Solids settling and removal system servicing the iron foundry. This system continuously separates foundry sand from waste water and was installed in 1967 and is in service today. A pressure filter was added in 1994 to remove fines.
- 2) Oil/water separator that continuously treats waste water from machining and washing operations. This system was installed in 1969 and is in service today.
- 3) Electroplating rinse water recycler that continuously distilled rinse waters and returned concentrate to plating baths and distillate to rinses. This system was installed prior to 1969 and was removed in 1974.
- 4) Electroplating rinse water precipitation system that continuously removed metals. This system was installed in 1974 and remained in service until 1978.

- 5) Electroplating rinse water precipitation system that continuously removed metals. This system was installed in 1978 and remained in service until 1993.
- Waste water treatment plant servicing all plating, cleaning and painting operations. This system was installed in 1993 and remains in service. It is a precipitation system that continuously removes metals and oils from rinse waters and cleaning and plating baths.
- 11. Identify all persons and other entities, including yourself, who determined how to treat, store, and/or dispose of hazardous wastes, hazardous substances, and industrial wastes generated at the facility. Provide the names and current addresses of all individuals who participated in such determinations.

David Ronkainen (former employee) Manager Environmental Technology 6615 Moccasin Bend Spring, Texas 77379 (713) 320-9258

David Ronkainen was the Supervisor of Environmental Affairs at the Wolf & 7th North Street facility from 1979 to 1987.

Brian Biittner
Manager, Engineering Services
Crouse-Hinds Division, Cooper Industries
P. O. Box 4999
Syracuse, NY 13221-4999
(315) 477-5127

Brian Biittner was the Manager of Environmental Affairs at the Wolf & 7th North Street facility from 1987 to 1993. Brian is currently the Manager, Engineering Services at the Wolf & 7th North Street facility.

Lawrence Fielding Environmental Engineer Crouse-Hinds Division, Cooper Industries P. O. Box 4999 Syracuse, NY 13221-4999 (315) 477-70002

Lawrence Fielding has been an environmental engineer at the Wolf & 7th North Street facility from 1989 to present.

Richard Evans
Manager, Environmental Affairs
Crouse-Hinds Division, Cooper Industries
P. O. Box 4999
Syracuse, NY 13221-4999
(315) 477-7000

Richard Evans has been the Manager of Environmental Affairs at the Wolf & 7th North Street facility since 1993.

12. Identify all of the sources of the information contained in your answers to questions 6-10. Provide copies of all documents that relate to your answers including, but not limited to invoices, manifests, hazardous substances, hazardous and industrial waste data and analyses or characterizations and contracts, or agreements with transporting, treatment, storage or disposal facilities.

Response: The following sources were used in responding to Questions 6-10:

- a) Cooper interviewed past and present employees. Please see Cooper's response to Question 16 below.
- b) North Landfill Solid Waste Management Facility Report.
- c) Letter to P.J. Vassallo from Norman H. Nosenchuck, dated 3/09/84. See Appendix 5.
- d) Hazardous Waste Generator Annual Reports. See Appendix 4 for summary.
- e) Waste stream profile records. See Appendix 3.
- f) Self Monitoring Reports to Onondaga County Dept. of Drainage & Sanitation. See Appendix 6 for a summary.
- g) <u>Cooper Industries 1833-1983</u> by David N. Keeler (a book on the history of Cooper).
- 13. Provide copies of applications for Refuse Act Permit Program, National Pollutant Discharge Elimination System Permits, and State Pollutant Discharge Elimination System Permits, including any waste analyses or characterization submitted with such applications. Provide copies of all permits issued and all amendments to said permits. Provide copies of all Notices of Violations, or administrative or judicial complaints, concerning such discharges submitted or filed by federal, state, county or municipal governments and their regulatory agencies as well as copies of all judicial complaints filed by other persons (including corporate or partnership entities or public interest groups).

Response: The following are attached:

- 1. Industrial Waste Water Permits (see Appendix 7 attached hereto).
- NYSDEC SPDES Stormwater Permit (see Appendix 9).
- 3. Stipulation agreement with Onondaga County resolving alleged waste water violations 1983-1994 (see Appendix 8).
- 4. NOV's (5) for alleged wastewater exceedances from 1994 to present (see Appendix 10).
- 14. Identify any current or previous insurance policies that may indemnify you or your company against any liability that you or any entity may incur in connection with the release of any hazardous substances and/or hazardous wastes at the Site. Please provide a copy of the policy. For any policy that you cannot locate or obtain, provide the name of the carrier, years in effect, nature and extent of coverage, and any other relevant information you have.

Response: It is Cooper's position that certain insurance policies issued to it and its predecessors provide insurance coverage for claims and/or damages related to releases of hazardous wastes or substances. Cooper will place its carriers on notice regarding the site. At the present time, it is not known which, if any, of these carriers will accept responsibility for any claim which may arise from this matter.

15. Supply any additional information that may be used to identify additional sources of information or parties involved with the Site.

Response: Cooper has no additional information or sources pertaining to the Site.

16. State the name, title, and address of each individual who assisted or was consulted in the preparation of the response to this "Request for Information" and specify the question to which each person assisted in responding.

APPENDIX # 1

CROUSE-HINDS DIVISION COOPER INDUSTRIES

SYRACUSE, NEW YORK

PLANT PROCESSES & WASTE STREAM DESCRIPTIONS BY DEPARTMENT (CURRENTLY GENERATED)

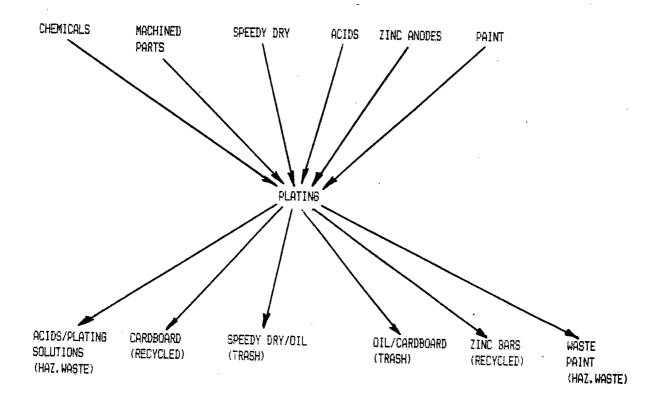

CROUSE-HINDS DIVISION COOPER INDUSTRIES

SYRACUSE, NEW YORK

PLANT PROCESS & WASTE STREAM
DESCRIPTIONS BY DEPARTMENT
(CURRENTLY GENERATED)

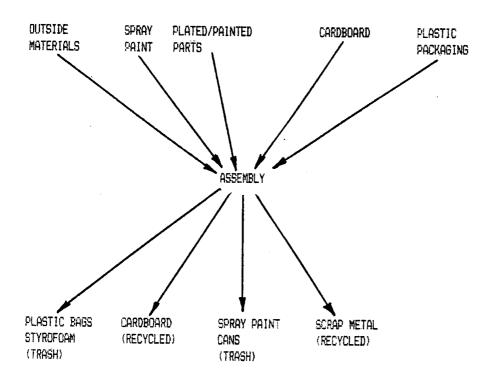

Plating

Parts are taken from most of the machining areas and electroplated with zinc. The process include washing, acid rinsing, plating, and possibly painting the parts in either a rack or barrel plater. The parts that come into the platers are often covered with cutting oil. As the parts are put on racks or into the barrels, the oil drips onto the floor and is absorbed with Speedy Dry. The residual oil and cardboard left in the empty tubs is thrown away. The Speedy Dry/oil mixture is also thrown into the trash. The other waste streams are the kraft bags from the Speedy Dry, 5 gallon pails, and cardboard boxes from parts brought in to be plated or acid washed. The acid and plating solutions are handled as hazardous wastes. Some of the raw chemicals come in fiber drums which are thrown away when they are empty.

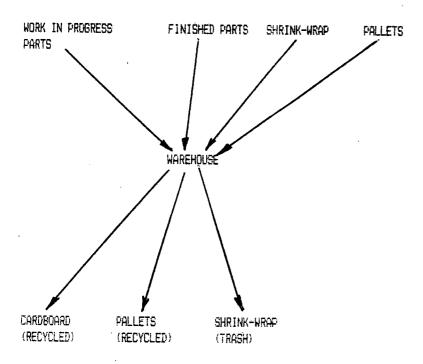

Assembly Areas

These areas take the finished parts (plated or painted) and put any additional hardware or wiring on the part. Labels are put on the product and the product is package for shipping. Extra packaging (plastic and styrofoam) and touch up spray paint are thrown away. Clean cardboard is put into a container for recycling. Any scrap parts are sent to the appropriate department for recycling.

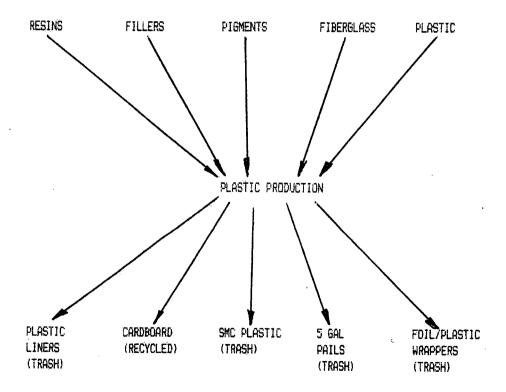

Warehouses

The two warehouses are buildings 23, which stores work in progress and building 50 which stores the finished product. Cardboard, shrink-wrap, and pallets are the primary waste streams coming from these areas. The cardboard and pallets are recycled, and the shrink-wrap is thrown away.

Plastics

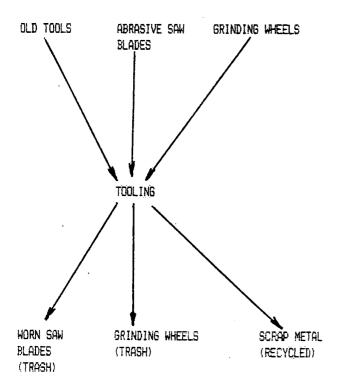

There are two types of plastics made in this department. injection molding and SMC Thermo-set in Compression molding. The injection molding plastic combination of plastic resins mixed and injected into molds in a single machine. These parts are usually small and more complex than the SMC parts. The SMC plastic is a mixture of resins, fillers and pigments that are blended with fiberglass to produce a plastic sheet. These sheets are cut into various sizes and the plastic is put into the compression molding machines to produce the desired part. The SMC plastic trimmings and scrap are put in the trash as are the foil/plastic wrappers and plastic liners used in making the SMC sheets. The injection mold plastic scrap is remelted and reused in their machines. The kraft bags and fiber drums that the resins and fillers come in are thrown away. Some of the pigments come in 5 gallon pails which are thrown away when they are empty.

WASTE STREAM # 004

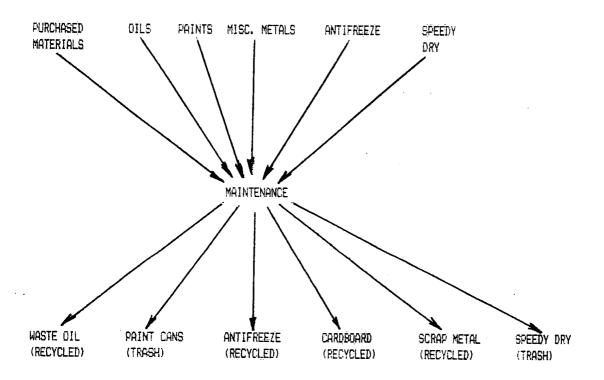

Tool Room

This area takes old tools and mends them to be used again. Some of these tools include taps, drill bits, and cutting tools. Grinding, cutting, and hardening are a few of the processes done in this area. The waste streams are abrasive saw blades, scrap metal, and grinding wheels. The scrap metal is recycled, but the saw blades and grinding wheels are thrown into the trash.

Maintenance

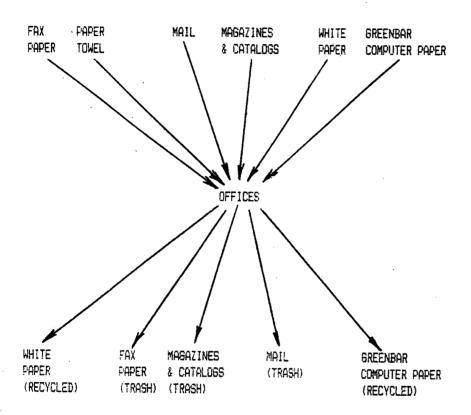

This department performs maintenance functions for the entire This include a vehicle shop, welding, painting, machining, and miscellaneous other duties. The waste streams involved with this department are scrap metal, cardboard, oils, antifreeze, and The scrap metal which often includes scrap machines and miscellaneous beams and piping are put into a large hopper for recycling. The cardboard, from purchased parts, is collected in a specified container and recycled. Waste oil is produced from routine maintenance on the machines in the various departments. It is stored in drums and tanks until it is properly removed by Safety Kleen for reprocessing. The used antifreeze comes from the Vehicle shop, which services our forktrucks, payloaders, other vehicles. The antifreeze is stored in drums and treated appropriately. The paints used in the maintenance department are oil based enamels as well as paint thinners. These paint cans are drained into a drum and then left to dry. Once these cans are dry, they are thrown into the trash and the large collecting drum is handled as a hazardous waste.

WASTE STREAM #006

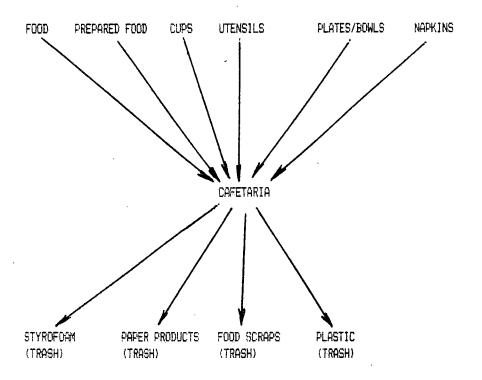

Offices

These areas produces reports, schedules, and other paper correspondence to other areas of the plant. The main waste streams are fax paper, paper towels, mail, magazines, white paper, and greenbar computer paper. The white and greenbar computer paper are recycled, but the remainder of the paper is thrown into the trash.

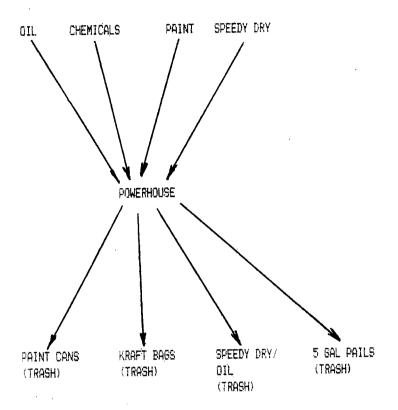

Cafetaria

The cafetaria serves breakfast and lunch to the employees. Styrofoam plates, cups, and bowls are used for serving the food. These materials are thrown into the trash after they are used. Plastic cups and utensils are also thrown into the trash. Paper napkins, cups, and paper towels are thrown away after they are used. Food scraps and prepared food wrappers are thrown away as well.

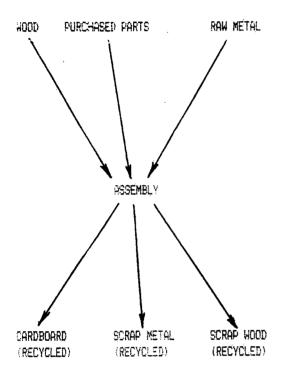

Powerhouse

The Powerhouse generates steam and air for production areas. It uses oil and other chemicals in its processes. The primary waste streams in this area are 5 gallon pails, speedy dry, kraft bags, and paint cans. All of these materials are thrown into the trash.

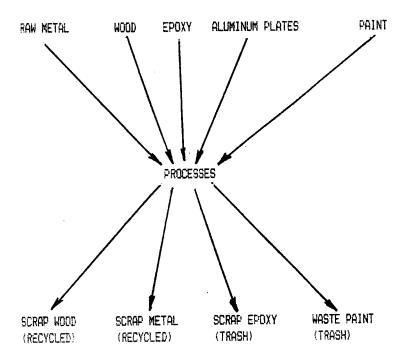

Rack Assembly

This area is assigned to assembling large racks of electrical enclosures. The waste streams produced in this area are cardboard from purchased parts, scrap wood, and scrap metal. All of these waste streams are recycled.

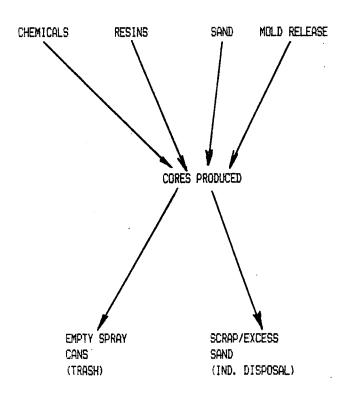

Pattern Shop

This department makes patterns for cores, molds, and other parts made at this facility. These patterns are made of wood, epoxy, and metal and require some tooling. The scrap wood and metal are recycled, but the scrap epoxy is thrown into the trash.

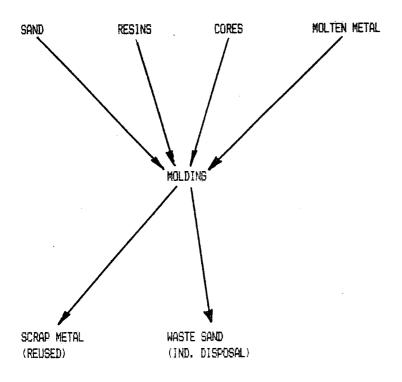

Ferrous Foundry Coreroom

The Coreroom makes sand cores for both the aluminum and iron foundries. The three different types of cores made are the Shell cores, Airset cores, and phenolic based resin core. These cores are made in all shaped and sizes. The scrap cores and excess sand are taken to sand pile for disposal. This sand does not go to the transfer station; it is handled independently from the other industrial waste. The empty drums of resins and other chemicals are sent away for reconditioning. The spray cans of mold release are thrown into the trash when they become empty.

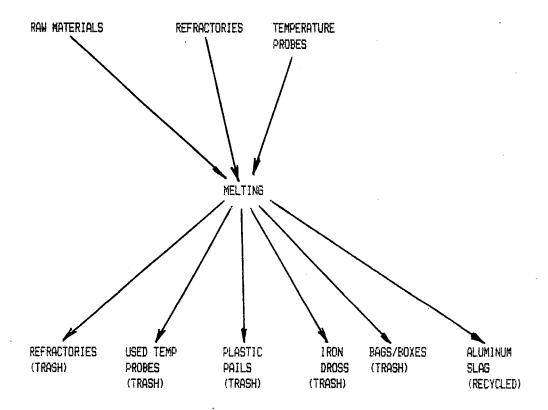

Ferrous and Non-Ferrous Molding

These areas take a cope and drag and pack sand around a pattern for each mold. Cores are then placed into the mold and the cope and drag are put together. Once together, molten metal is poured into the molds and a part is produced. The waste sand from the molds and cores are taken to the sand pile for disposal which is independent of the normal industrial disposal process. The excess metal is removed from the sand before it goes to the sand pile. This metal is reused in the melting process.

Ferrous and Non-Ferrous Melting

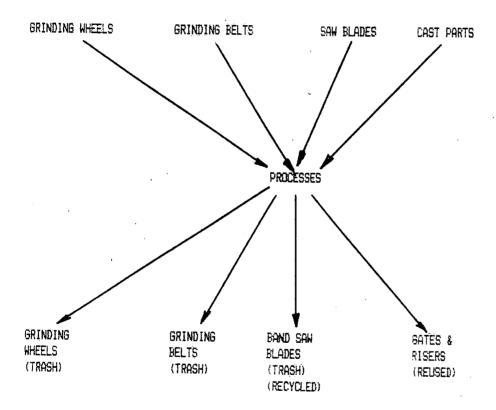

Raw materials are brought into the area and mixed together to form a specific mix of iron or aluminum. The components are mixed in electric furnaces which are lined with various refractories. These refractories are removed when needed and thrown into the The molten metal is poured into smaller pouring ladles which are also lined with refractories. These materials are also The refractories come in 5 gallon pails, paper bags thrown away. and cardboard boxes which are thrown into the trash when empty. Temperature probes are used to measure the temperature of the iron or aluminum. These probes can only be used once and then they are thrown away. The dross (slag) that is scraped off of the top of the molten metal is thrown into the trash. This dross is the impurities in the iron caused from mixing the raw iron, carbon compounds, ferro-silicon, and slag coaqulants.

WASTE STREAM #014

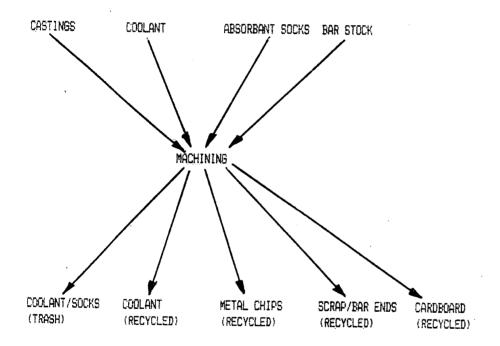

Ferrous and Non-Ferrous Grinding Areas

Both of these areas take the cast parts and remove the gates and risers. They also grind the parts to remove any burns or sharp edges. The Ferrous grinding area uses grinding wheels to remove any metal. These grinding wheels are thrown into the trash when they become broken or worn out. The non-ferrous grinding area first cuts off the gates and risers with a band saw and then grinds the parts as desired. All of the gates and risers from both areas are taken to the melting department for remelting. The grinding is done with belt grinders and these belts are also thrown into the trash. The band saw blades are sometimes thrown into the trash but some are pecycled.

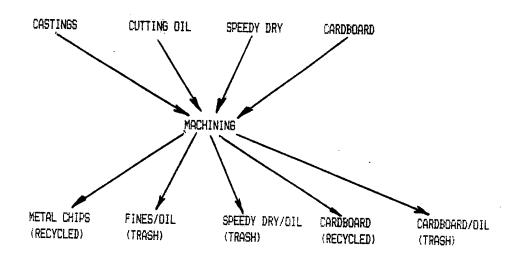

CNC Machining Areas

These departments machine the castings produced in the non-ferrous and iron foundries as well as steel, aluminum, and brass bar stock. Some of the machining operations include threading, milling, and turning. Trim Sol water based coolant is used in these machines and is recycled on-site when needed. Some of the coolant leaks onto the floor and is soaked up with absorbent socks. The socks/coolant are thrown into the trash to be taken to the landfill. The metal chips produced by the machining processes are taken to specified hoppers for recycling. The scrap parts and bar ends are taken back to the foundry for remelting or sent away for recycling.

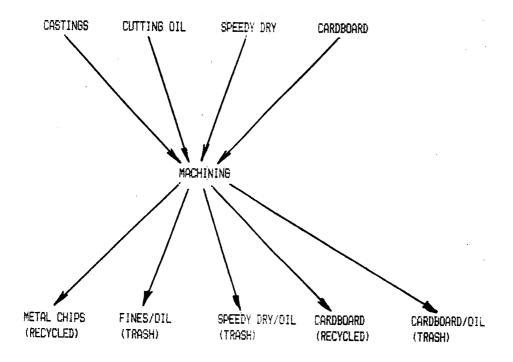

Condulet Machining

Condulet Machining also machines the castings from the iron and non-ferrous foundries along with die cast pieces. Parts are drilled, threaded and milled in this area. Some of the cutting oil leaks and splashes onto the floor, but is absorbed with Speedy Dry (a clay absorbent). As the parts are machined, they are put into metal tubs for further processing. The parts in these tubs are in layers separated by cardboard sheets, which often become soaked in The oil is separated from the metal chips with chip cutting oil. spinners and the chips are then recycled. The oil is stored in tanks until it is picked up by Safety Kleen. The small fines of metal which collect in the bottom of the machines are cleaned out when needed and taken to the trash for disposal. The Speedy Dry is also taken to the trash as well as the oil soaked cardboard.

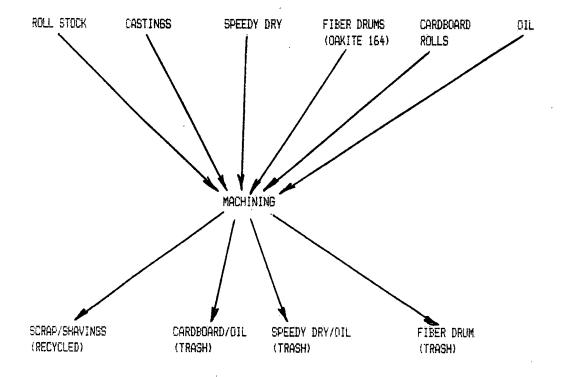

Screw Machining

Screw Machining takes steel, brass, and aluminum bar stock and machines it into specified parts. The machining operations involved in this area are turning, drilling, threading, and facing. Some of the cutting and lubricating oils leak and splash onto the floor, but are absorbed with Speedy Dry (a clay absorbent). As the parts are machined, they are put into metal tubs for further processing. The parts in these tubs are in layers separated by cardboard sheets, which often become soaked in cutting oil. The oil is separated from the metal chips with chip spinners and the chips are then recycled. The oil is stored in tanks until it is picked up by Safety Kleen. The small fines of metal which collect in the bottom of the machines are cleaned out when needed and taken to the trash for disposal. The Speedy Dry is also taken to the trash as well as the oil soaked cardboard.

Junction Box and Presses

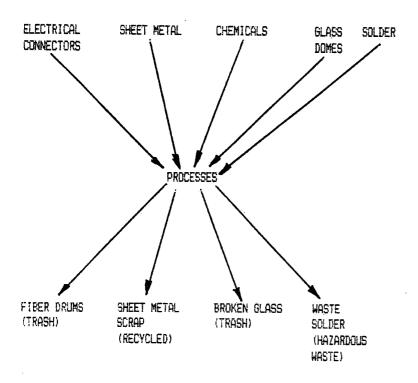

Junction Box machining involves machining specialty parts made of aluminum and iron. The presses take metal roll stock and cuts and punches it into parts. The shavings and scrap are collected in tubs and taken to their specific hopper for recycling. Some residual oil is absorbed with Speedy dry in both departments. Metal bands are collected in the Press room for recycling. Some chemicals are stored in fiber drums, which are thrown into the trash when they become empty. Cardboard is also used as lining in the tubs for machined parts. This cardboard becomes coated with oil and must be thrown into the trash.

WASTE STREAM #019

Sheet Metal

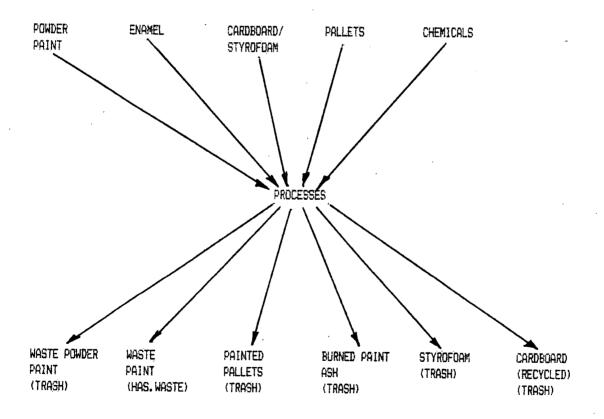

This department takes sheet metal and bends, punches and assembles it into specified part. Glass domes for the lighting fixtures are coated to prevent breaking and electrical connectors are soldered together in this department. There are also acid dip tanks for cleaning parts in this area. The scrap sheet metal is taken to the appropriate hopper for recycling. The broken glass domes are thrown into the trash and the waste solder is put into a hazardous waste drum and disposed of accordingly. Some of the cleaning chemicals used in the acid dip process come in fiber drum which are thrown away when empty. The coils of electrical connectors come in fiber drums which are also thrown away when empty.

WASTE STREAM #020

Enamel

Parts are brought from departments and painted with a dry powder or enamel paint. The parts painted with the dry paint are first washed, then negatively charged, and then sprayed with the powdered paint. The paint is attracted to the charged parts, thus sticking to the part. The parts are baked to harden the paint. The enamel is sprayed on the parts in spray booths. The spray paint often ends up covering some pallets and therefore are thrown The dry paint is reused but some must be thrown away as needed. Parts are also acid washed in this department. The parts are dumped from their wash baskets into cardboard lined metal tubs for further processing. This cardboard will later be thrown into the trash. The waste enamel paint and chemicals are handled as hazardous wastes. The hooks that carry the parts through the dry paint process must be cleaned as needed. This is done by burning the waste paint off of the hooks. The ash from the burn off is put into the trash.

CROUSE-HINDS CHEMICAL MANAGEMENT & CONTROL POLICY & PROCEDURE

CROUSE-HINDS

CHEMICAL MANAGEMENT AND CONTROL

POLICY & PROCEDURE

MARCH 1995

Cooper Industries Crouse-Hinds Division P.O. Box 4999 Syracuse, NY 13221-4999

Inter-Office Correspondence

Crouse-Hinds

Date: 4/4/95

To: Distribution

From: Dave Sensinger, x5258

Subject: Crouse-Hinds Chemical Management & Control

cc:

Attached is the updated list of approved chemicals. The list is sorted by Department and then by reference number.

Also attached is a copy of the procedure on obtaining approval to use new chemicals and to dispose of chemicals no longer used.

Please call me if you have any questions

(COVERLTR.WPD)

PROCEDURE & FORMS

CHEMICAL CONTROL POLICY

1.0 Objective:

1.1 With ever increasing environmental compliance requirements and legislation, tight control over chemicals is imperative. Tracking of purchased chemicals will improve the accuracy of environmental reporting and will allow Crouse-Hinds to better capture its manufacturing costs. As a result, the following procedures have been adopted and will govern the purchase and/or procurement of all chemicals at Crouse-Hinds.

2.0 Scope:

2.1 This policy applies to all chemicals purchased, obtained gratis or otherwise used at Crouse-Hinds.

3.0 Responsibility:

- 3.1 Any employee attempting to bring a chemical substance into the plant from an outside source.
- 3.2 Five authorizing signatures are required in the routing of the chemical request to allow permission to bring the substance into the plant.

4.0 <u>Definitions</u>:

4.1 Chemical: Any substance in any form (liquid, solid or gas), used in a process or operation that changes the properties of itself or of another substance (eg. refractory, coating, component of a mixture, etc.) or facilitates a process (eg. cutting oil, solvent, catalyst, etc.).

5.0 <u>References:</u>

- 5.1 Manufacturing Administration, Cost & Data Control procedure #01-01-12-025 (05-24-93).
- 5.2 Form A0002 (06-93) or latest "New Chemical Request"
- 5.3 Form A0003 (06-93) or latest "Vendor Acknowledgement"
 - 5.4 Form A0004 (06-93) or latest "Chemical Addition/ Removal Request"
- 5.5 Form A0005 (06-93) or latest "Chemical Disposal Sheet"

CHEMICAL PURCHASING PROCEDURES

6.0 Section I - CHEMICAL ORDERING PROCEDURE

6.1 Requisition Procedure

- 6.1.1 User will requisition chemicals from Purchasing by using a reference number, chemical name, and order quantity. COPICS will contain all chemicals by reference number, department, and center including the description, unit of measure, vendor information, etc.
- 6.1.2 Chemical Purchasing Coordinator will cross-check the reference number against the current listing of approved chemicals. If approved and not in stock, order chemical. If NOT on the approved list, refer to the following New Chemical/Chemical Replacement Procedure.

6.2 New Chemical/Chemical Replacement Procedure

- NOTE: All new chemical acquisitions including samples, trial quantities, and new purchases will be handled according to the following procedure.
 - 6.2.1 The Chemical Purchasing Coordinator will send the requisition back to the Requestor until official approval has been granted.
 - 6.2.2 The Requestor must generate a Chemical Review Package (CRP) consisting of the New Chemical Request, signed Vendor Acknowledgement, Chemical Addition/Removal Request and MSDS forms.
 - 6.2.3 This request <u>must</u> initially be approved by the Supervisor or Manager for that particular department. Route the CRP to the appropriate Manufacturing Engineering group (Factory or Foundry Methods).
 - 6.2.4 If M.E. approves the feasibility of the new chemical, route the CRP to Environmental Affairs for approval. Route to Safety for approval. Route to Materials (Purchasing). If all approve, continue to (6.2.6).
 - 6.2.5 If any one group does not approve, the original routing will be pre-empted and the CRP will be returned to the Chemical Purchasing Coordinator. The Chemical Purchasing Coordinator will call the requestor to inform them that the new chemical request has been denied, and explain the reason for the denial.
 - 6.2.6 A copy of the approval sheet with the required signatures and/or explanations will be sent to the

Requestor.

- 6.2.7 If approval is received from Materials and all groups approve, the chemical is officially approved for use at Crouse-Hinds.
- 6.2.8 For a replacement chemical, Requestor will coordinate to test the sample/trial chemical in a pilot run with the appropriate Methods Engineering group.
- 6.2.9 If a sample/trial chemical is deemed unusable after it has been tested, the Requestor will complete the *REMOVE* section of the "Chemical Addition/Removal Request" and a "Chemical Disposal Sheet". Send these to the Chemical Purchasing Coordinator.
- 6.2.10 The user is <u>required</u> to return any unwanted and/or unused portions to the Vendor per the "Vendor Acknowledgement" form.
- 6.2.11 If the proposed chemical is preferred, the Requestor will complete the *REMOVE* section of the "Chemical Addition/Removal Request" and "Chemical Disposal Sheet" for any obsolete chemical quantities. Send these to the Chemical Purchasing Coordinator.
- 6.2.12 The Chemical Purchasing Coordinator will route the "Chemical Disposal Sheet" to Environmental Affairs for proper removal and disposal.
- 6.2.13 If accepted, the Chemical Purchasing Coordinator will input Vendor information onto COPICS and route the CRP to Cost and Data Control to update COPICS per procedure #01-01-12-025. Requestor and Purchasing will establish the effective date for change and follow Section II for disposal of unused/obsolete chemicals. Cost and Data Control will deactivate the old chemical reference number after the effective date.
- NOTE: The approval process (routings) may take some time to complete. Requestors of new chemicals should plan accordingly.

7.0 Section II - DISPOSAL PROCEDURE

- 7.1 Identify chemicals that are targeted for disposal. First, contact the Chemical Purchasing Coordinator so that he may check through COPICS to see that no other department is currently using that specific chemical.
 - 7.1.1 If another department is using that chemical, the Chemical Purchasing Coordinator will check the

feasibility of having the remaining stock transferred to that department.

- 7.1.1.1 If a stock transfer is feasible, the department Supervisors will be responsible for arranging and coordinating the actual move.
- 7.1.1.2 Once the stock transfer is complete, the Supervisor should contact the Chemical Purchasing Coordinator and verify that the transfer is complete so that the COPICS tracking system may be updated.
- 7.1.2 If no department is using that chemical, obtain a "Chemical Disposal Sheet" from this packet or the Chemical Purchasing Coordinator. Complete the form and attach the MSDS and "Vendor Acknowledgement" (if applicable) forms.
- 7.2 If the chemical is a trial or sample, the Chemical Purchasing Coordinator will arrange a Vendor pick-up of the unused portions per the "Vendor Acknowledgement" form.
- 7.3 If any chemical must be shipped out of the plant by any means, Environmental Affairs must be contacted for adherence to any and all state and federal regulations.

VIII. EPA Information

46. Is this waste hazardous as defined by RCRA Part 261 (O.A.C. 3745-51)? Y

If you, list the applicable EFA Hazardous Waste Number(s) and explain why you have assigned the number(s). For example, if you assign DOUL the reason for selection is that the flash point is less than 140 degrees F. If you assign F002, provide the solvent or solvent blend nocessitating the listing. If the waste is a "mixture" or "derived-from" waste provide all sra Hazardous Wasto Numbers that carry through.

Note: One or more of the following wasto codes will apply:

PRETREATMENT & DISPOSAL RECOMMENDATION

Safety Precautions : Avoid Skin & Eye Contact

RECOMMENDED:

Amount of Original Waste 100% vol. Direct Landfill Burial:

Sanitary. BFI Niagara Recycling

** See attached analysis

Comments:

Mix the waste with refuse at the active face of the landfill.

See the attached analytical data from Upstate Laboratories and Material Safety Data Sheets.

The above is a recommendation of the BFI Houston Laboratory Group. It must be understood that management of the waste for treatment and/or disposal at the designated facility must be in compliance with the facility's permit and applicable federal, state, and local regulations. The waste treatment and/or disposal recommendation and any test data reported are based upon a review of the information provided by the generator and from the evaluation of a sample of the waste material identified as BFI 79798 which is reported to be representative of the waste material described on the enclosed BFI Waste Characterization Data (WCD) sheet. This recommendation is contingent upon the receipt at the treatment and/or disposal facility of a waste material essentially equivalent in Chemical composition and physical properties to that as defined above. This waste stream has been assigned EFI Waste Code: NY/132/930106/79798

PRETREATMENT & DISPOSAL RECOMMENDATION

Safety Precautions: Avoid Skin & Eye Contact

RECOMMENDED:

Direct Landfill Burial: Amount of Original Waste 100% vol.

Sanitary.. BFI Niagara Recycling

** See attached analysis

Comments:

Mix the waste with refuse at the active face of the landfill.

See the attached analytical data from Upstate Laboratories and Material Safety Data Sheets.

The above is a recommendation of the BFI Houston Laboratory Group. It must be understood that management of the waste for treatment and/or disposal at the designated facility must be in compliance with the facility's permit and applicable federal, state, and local regulations. The waste treatment and/or disposal recommendation and any test data reported are based upon a review of the information provided by the generator and from the evaluation of a sample of the waste material identified as BFI 80209 which is reported to be representative of the waste material described on the enclosed BFI Waste Characterization Data (WCD) sheet. This recommendation is contingent upon the receipt at the treatment and/or disposal facility of a waste material essentially equivalent in chemical composition and physical properties to that as defined above. This waste stream has been assigned BFI Waste Code: MY/132/930115/80209

#### PRETREATMENT & DISPOSAL RECOMMENDATION

Safety Precautions: Avoid Skin & Eye Contact

RECOMMENDED:

Direct Landfill Burial: Amount of Original Waste 100% vol.

Sanitary.. BFI Niagara Recycling

** See attached analysis

Comments:

Mix the waste with refuse at the active face of the landfill.

See the attached analytical data from Upstate Laboratories.

The above is a recommendation of the BFI Houston Laboratory Group. It must be understood that management of the waste for treatment and/or disposal at the designated facility must be in compliance with the facility's permit and applicable federal, state, and local regulations. The waste treatment and/or disposal recommendation and any test data reported are based upon a review of the information provided by the generator and from the evaluation of a sample of the waste material identified as BFI 79803 which is reported to be representative of the waste material described on the enclosed BFI Waste Characterization Data (WCD) sheet. This recommendation is contingent upon the receipt at the treatment and/or disposal facility of a waste material essentially equivalent in chemical composition and physical properties to that as defined above. This waste stream has been assigned BFI Waste Code:

BFI Lab Number : 79830

#### PRETREATMENT & DISPOSAL RECOMMENDATION

Safety Precautions: Avoid Skin & Eye Contact

RECOMMENDED:

Direct Landfill Burial: Amount of Original Waste 100% vol.

Sanitary.. BFI Niagara Recycling

** See attached analysis

Comments:

Mix the waste with refuse at the active face of the landfill.

See the attached analytical data from Upstate Laboratories and Material Safety Data Sheets.

The above is a recommendation of the BFI Houston Laboratory Group. It must be understood that management of the waste for treatment and/or disposal at the designated facility must be in compliance with the facility's permit and applicable federal, state, and local regulations. The waste treatment and/or disposal recommendation and any test data reported are based upon a review of the information provided by the generator and from the evaluation of a sample of the waste material identified as BFI 79830 which is reported to be representative of the waste material described on the enclosed BFI Waste Characterization Data (WCD) sheet. This recommendation is contingent upon the receipt at the treatment and/or disposal facility of a waste material essentially equivalent in chemical composition and physical properties to that as defined above. This waste stream has been assigned BFI Waste Code:

#### REACTIVITY REPORT

Radioactivity, exposure dose.

Results: < 0.05 mR/hr.

Characteristic of Ignitability as per 40 CFR 261.21.

Results: NEGATIVE

Characteristic of Corrosivity as per 40 CFR 261.22.

Results: NOT APPLICABLE

pH, 5% slurry by weight.

Results: 6.0

Characteristic of Reactivity as per 40 CFR 261.23.

Results: SULFIDE <5 ppm; CYANIDE <2 ppm

Reaction when exposed to air as per 40 CFR 261.23.

Results: NONE DETECTED

Reaction when mixed with water as per 40 CFR 261.23.

Results: NONE DETECTED; 99% INS

Reaction when mixed with a 10% wt. solution of HCL.

Results: NONE DETECTED: 99% INS

Reaction when mixed with a 10% solution of NaOH.

Results: NONE DETECTED; 99% INS

Density

Results: 1482.6 (lb./cu.yd.)

#### PRETREATMENT & DISPOSAL RECOMMENDATION

Safety Precautions: Avoid Skin & Eye Contact

RECOMMENDED:

Amount of Original Waste 100% vol. Direct Landfill Burial:

Sanitary.. BFI Niagara Recycling

** See attached analysis

Comments:

Mix the waste with refuse at the active face of the landfill.

See the attached analytical data from Upstate Laboratories and Material Safety Data Sheet.

The above is a recommendation of the BFI Houston Laboratory Group. It must be understood that management of the waste for treatment and/or disposal at the designated facility must be in compliance with the facility's permit and applicable federal, state, and local regulations. The waste treatment and/or disposal recommendation and any test data reported are based upon a review of the information provided by the generator and from the evaluation of a sample of the waste material identified as BFI 80208 which is reported to be representative of the waste material described on the enclosed BFI Waste Characterization Data (WCD) sheet. This recommendation is contingent upon the receipt at the treatment and/or disposal facility of a waste material essentially equivalent in chemical composition and physical properties to that as defined above. This waste stream has been assigned BrI Waste Code: NY/132/930115/80208

#### PRETREATMENT & DISPOSAL RECOMMENDATION

Safety Precautions: Avoid Skin & Eye Contact

#### RECOMMENDED:

Direct Landfill Burial:

Amount of Original Waste 100% vol.

Sanitary.. BFI Niagara Recycling

** See attached analysis

Comments:

Bury the containerized waste at the base of the landfill. Drums must contain only solids, be completely filled, properly sealed and labeled prior to shipment for disposal.

See the attached letter from the generator dated 12/10/91 as an addendum to the WCD.

Also see the attached analytical data from Upstate Laboratories and Material Safety Data Sheets.

The above is a recommendation of the BFI Houston Laboratory Group. It must be understood that management of the waste for treatment and/or disposal at the designated facility must be in compliance with the facility's permit and applicable federal, state, and local regulations. The waste treatment and/or disposal recommendation and any test data reported are based upon a review of the information provided by the generator and from the evaluation of a sample of the waste material identified as BFI 78796 which is reported to be representative of the waste material described on the enclosed BFI Waste Characterization Data (WCD) sheet. This recommendation is contingent upon the receipt at the treatment and/or disposal facility of a waste material essentially equivalent in chemical composition and physical properties to that as defined above. This waste stream has been assigned BFI Waste Code: NY/132/930106/79796

#### PRETREATMENT & DISPOSAL RECOMMENDATION

Safety Precautions: Avoid Skin & Eye Contact

RECOMMENDED:

Amount of Original Waste 100% vol. Direct Landfill Burial:

Sanitary.. BFI Niagara Recycling

** See attached analysis

Comments:

Mix the waste with refuse at the active face of the landfill.

See the attached analytical data from Upstate Laboratories and Material Safety Data Sheets.

The above is a recommendation of the BFI Houston Laboratory Group. It must be understood that management of the waste for treatment and/or disposal at the designated facility must be in compliance with the facility's permit and applicable federal, state, and local regulations. The waste treatment and/or disposal recommendation and any test data reported are based upon a review of the information provided by the generator and from the evaluation of a sample of the waste material identified as BFI 79797 which is reported to be representative of the waste material described on the enclosed BFI Waste Characterization Data (WCD) sheet. This recommendation is contingent upon the receipt at the treatment and/or disposal facility of a waste material essentially equivalent in chemical composition and physical properties to that as defined above. This waste stream has been assigned BFI Waste Code: NY/132/930106/79797

## 5. THIS WASTE CONTAINS Note if the waste contains any of the following: ☐ Radioactive Materials ☐ Etiological Agents ☐ Free Liquids ☐ Dioxins ☐ PCBs not regulated by ☐ Pathogens ☐ Free Cyanide ☐ Organic Solvents TSCA 40 CFR 761 ☐ Free Sulfide ☐ Used Oils OSHA Substances ☐ Biological Materials ☐ None of the above XX Virgin Oils ☐ Free Ammonia If any of the above are checked "Yes", specify type (if applicable) and include its concentration as part of the waste composition, Section 6. 6. COMPLETE WASTE COMPOSITION Concentration ranges are suggested, but total must equal 100%. Units must be identified and are to be in parts per million (ppm) and/or percentages (%). Attach additional pages if necessary. Range Range Components Min. / Max. 'Components Min. / Max. 30 See attached #6 Fuel oil 70 Speedy Dry 7. TRANSPORTATION INFORMATION If the waste is a DOT Hazardous Material, complete the following: Proper USDOT Shipping Name: _ CERCLA Reportable Quantity_ USDOT Hazard Class:_ UN or NA Number:_ 8. SUPPLEMENTAL INFORMATION ☐ Waste Composition MSD Sheets ☐ Memo/Letter ☐ None X Analytical Data No. of Pages_ Other - describe 9. GENERATOR'S CERTIFICATION I hereby certify that the above and attached description is complete and accurate to the best of my knowledge and ability to determine, that no deliberate or willful omissions of composition or properties exists, that all known or suspected hazards have been disclosed, and that the waste is not designated a Hazardous Waste by the USEPA or contains PCBs regulated by TSCA 40 CFR 761. GENERATOR'S AUTHORIZED SIGNATORY:

**Environmental Affairs** Manager. Brian Biittner DATE

# REPRESENTATIVE SAMPLE CERTIFICATE

This Section is to be completed by the person obtaining the sample of the above described waste, preferably a representative of the generator. DO NOT COLLECT OR SUBMIT SAMPLES THAT ARE RADIOACTIVE, SHOCK SENSITIVE, EXPLOSIVE, OR PYROPHORIC.

I certify that the sample identified below that is being forwarded to BFI for evaluation is representative of the waste described above. I also understand that, should the waste material described herein not be acceptable for management by BFI Waste Systems, the sample(s) may be returned to the generator.

The state of the generator.
